

Zoom H4n Pro

Quick-start guide

1. Insert SD card on the **right side panel**.
2. To turn on, pull down the standby-switch on the **left side panel**.
3. To check audio levels, plug in headphones via the mini-jack port on the left side panel. To adjust the recording level (gain), use the + and - buttons on the right side panel. Make sure the audio signal is not clipping. To adjust volume in headphones, use the buttons on the left side panel.
4. Press the record button to arm the recording (get it ready to record). Press it a second time to start the recording.
5. To listen back to your recording, press the play/pause button

The above setup is for the built in stereo mics at the top of the device and is indicated by the red light next to 'mic.' To attach a boom mic, connect it via an XLR cable to input 1. If audio is coming through the left side only, press menu, then input and turn 1/2 link and mono mix ON to hear the mono audio signal through both sides.
